

# **Optimizing Production of Horizontal Wells. Well-Stimulation Challenges for Completion Engineers: How to Effectively Stimulate a Horizontal Well**

*Keith Rispler<sup>1</sup>*

*Fracturing treatments have proven to be an effective method of optimizing production in horizontal wells. Pin Point Fracturing Technology (PPF) is a proven effective method of creating multiple fracture treatments in both vertical and horizontal wells in a single trip to the well.*

*Over 500 Pin Point Fracturing treatments (PPF) have been performed in the Williston Basin since the introduction of this technology. This presentation will discuss Pin Point Fracturing Technology and experience in both open and cased horizontal wells.*
