The Bakken Formation

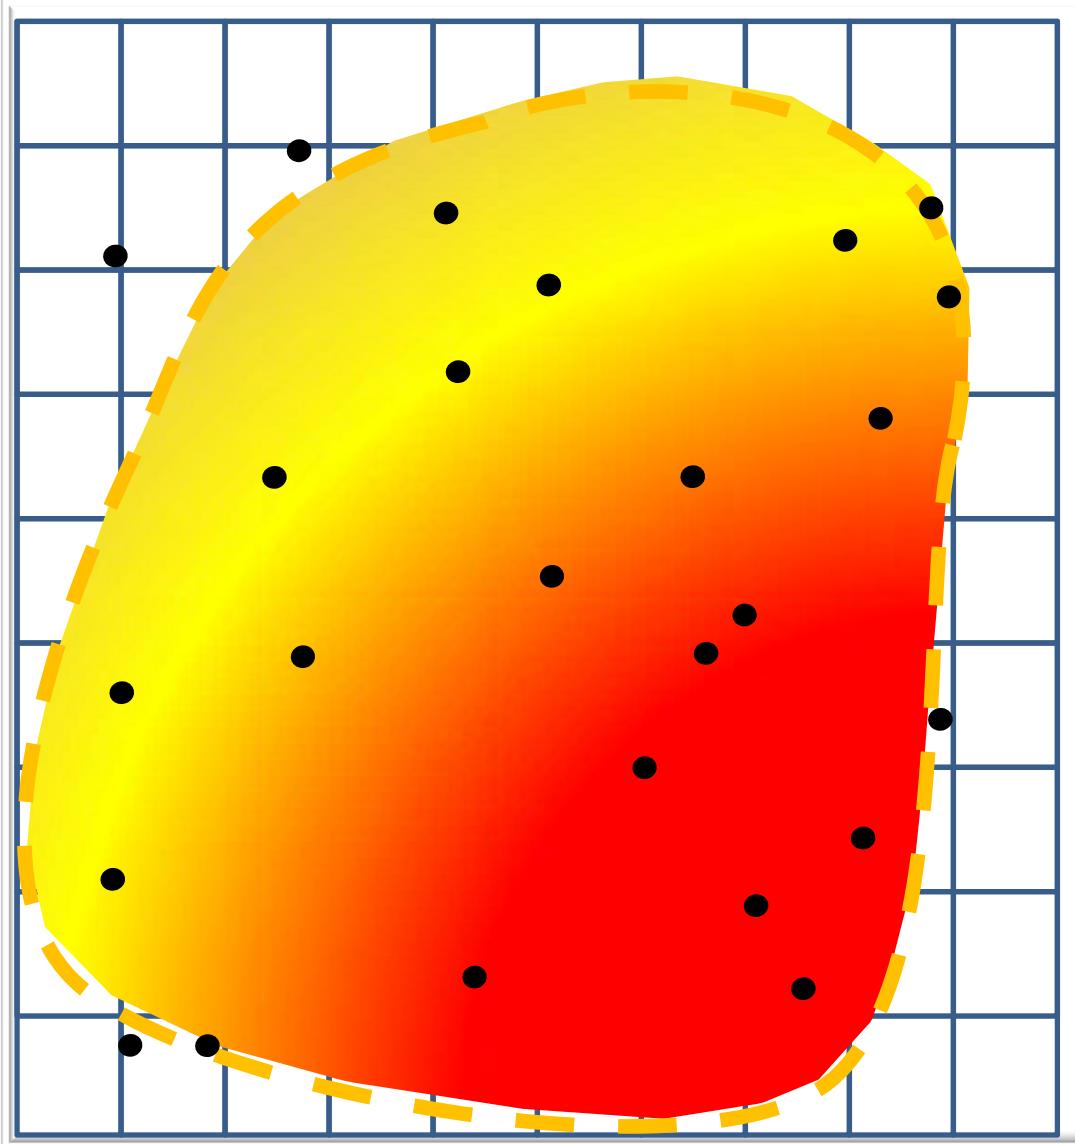

- Stretches from Montana and North Dakota to Manitoba and Saskatchewan.
- Stratigraphically equivalent to the Exshaw which extends through Alberta and into northeastern B.C.

Geology

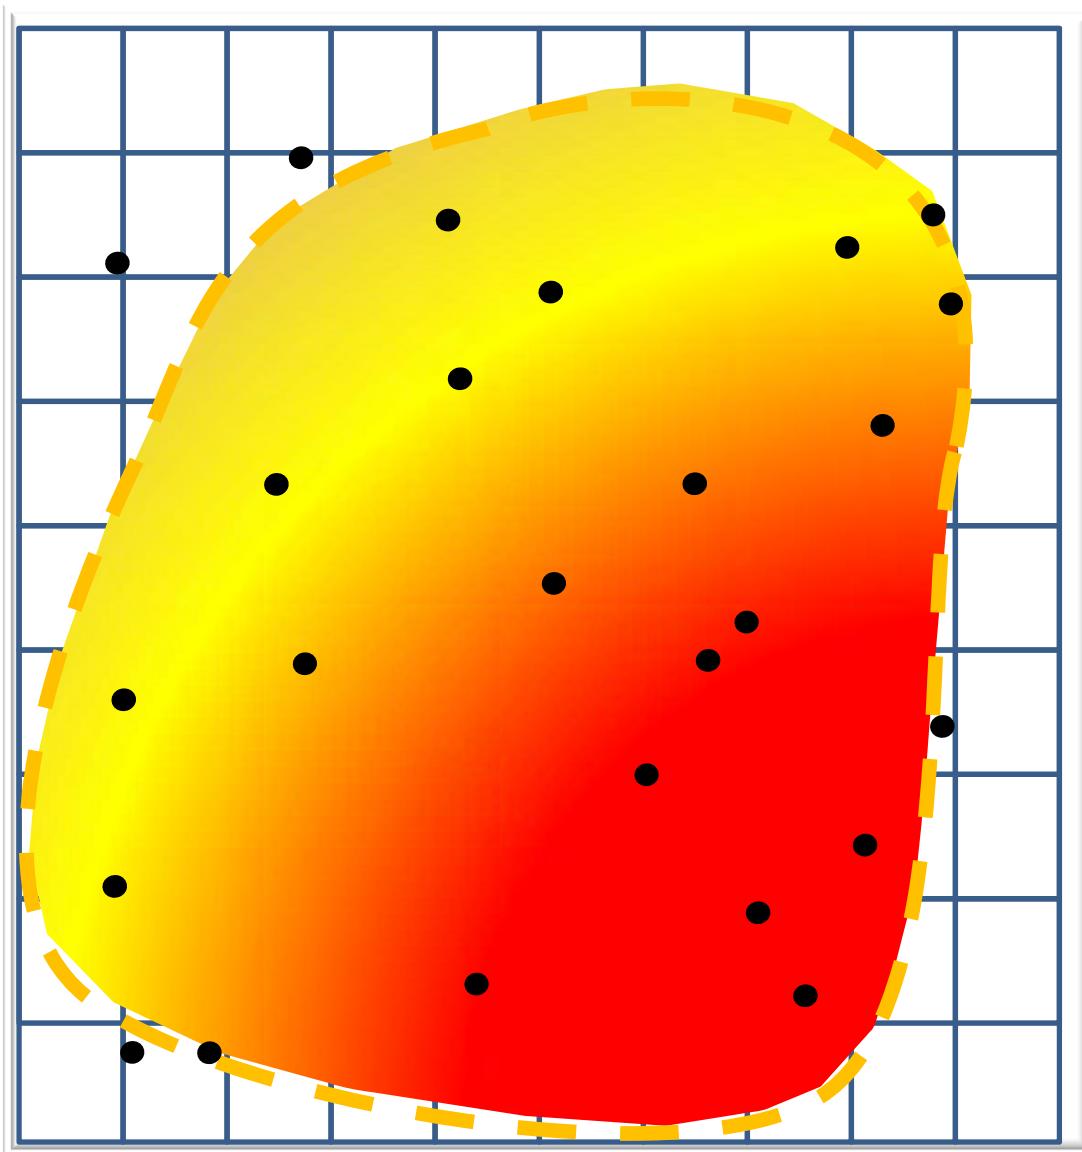

Assessment of Continuous Resources

- We know there is petroleum everywhere...
- But reservoir conditions change from place to place

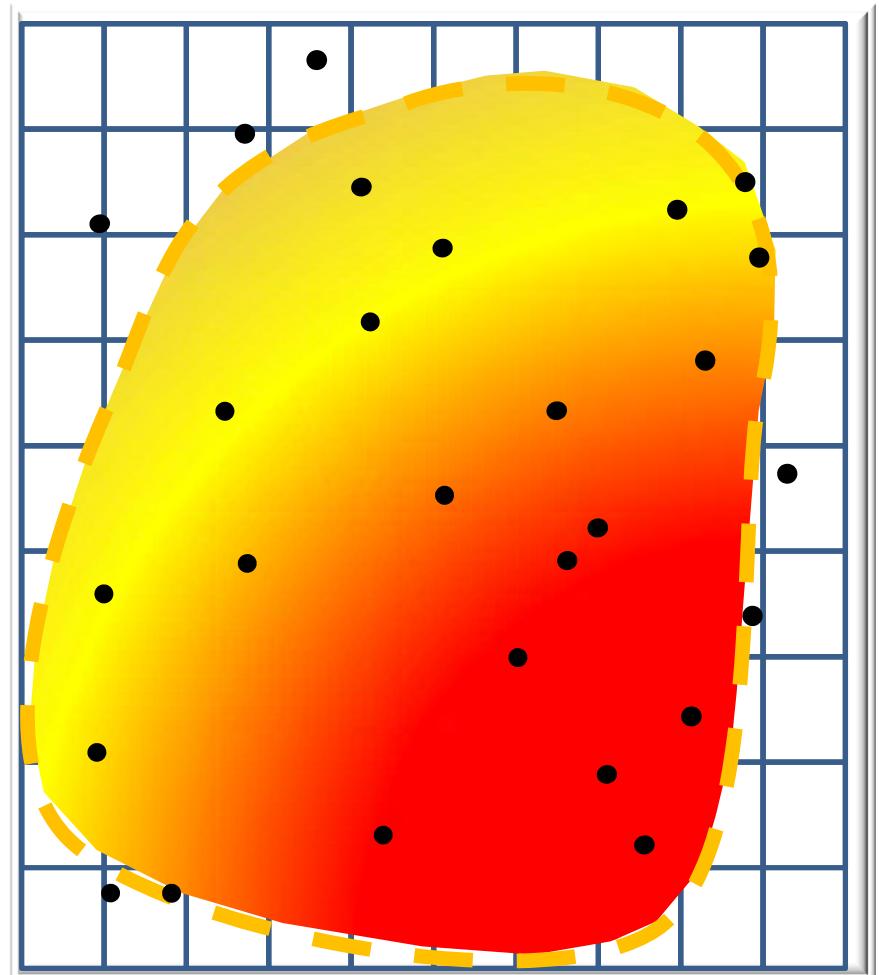

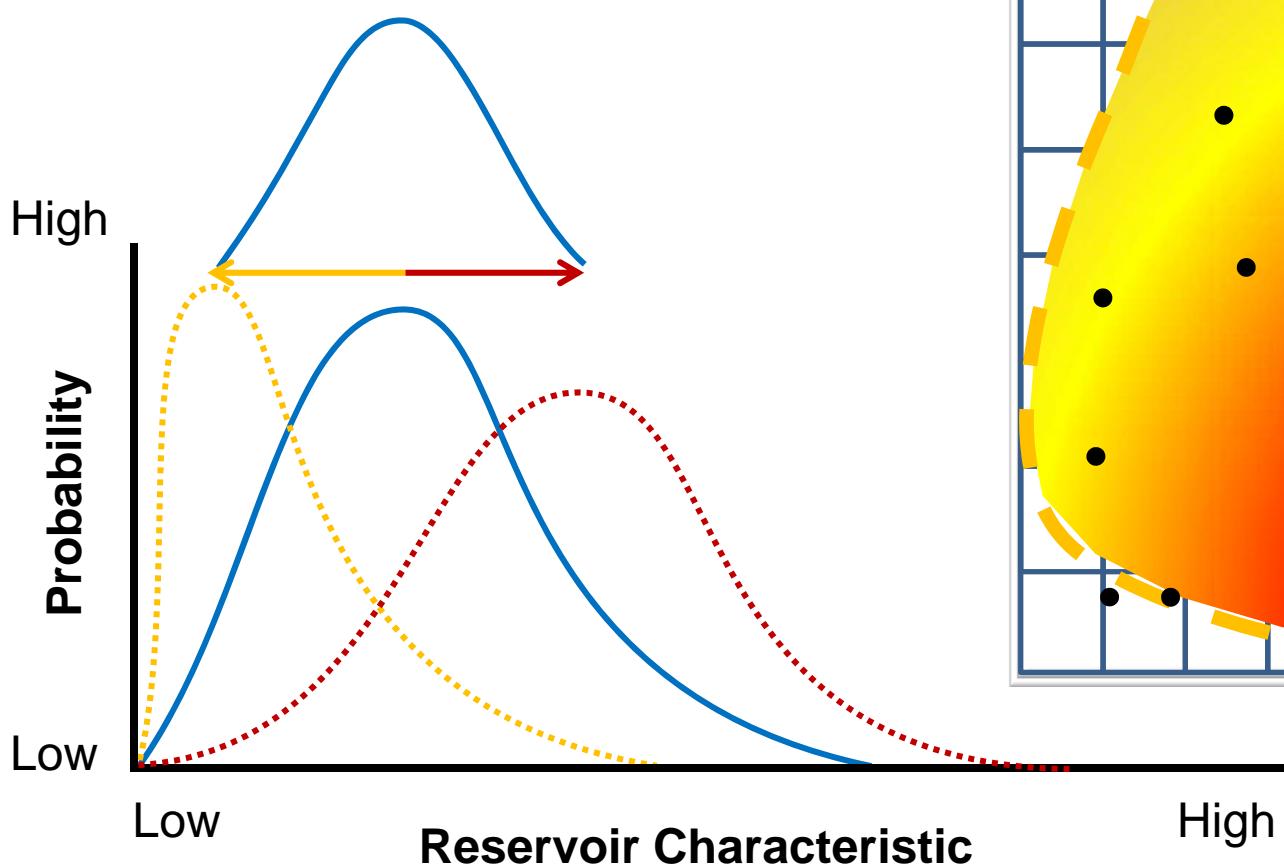

Assessment of Continuous Resources

- Calculate PIP
 - Mix of real data and Monte Carlo simulations
- Two scales
 - Local
 - Basin scale (distribution of distributions)

“Distribution of Distributions”

Development

In-place and Marketable Resources

- Oil
 - Volumetric Equation
- Mapped Variables
 - Thickness, Porosity, Water Saturation, FVF,
- Gas
 - Gas to Oil Ratios

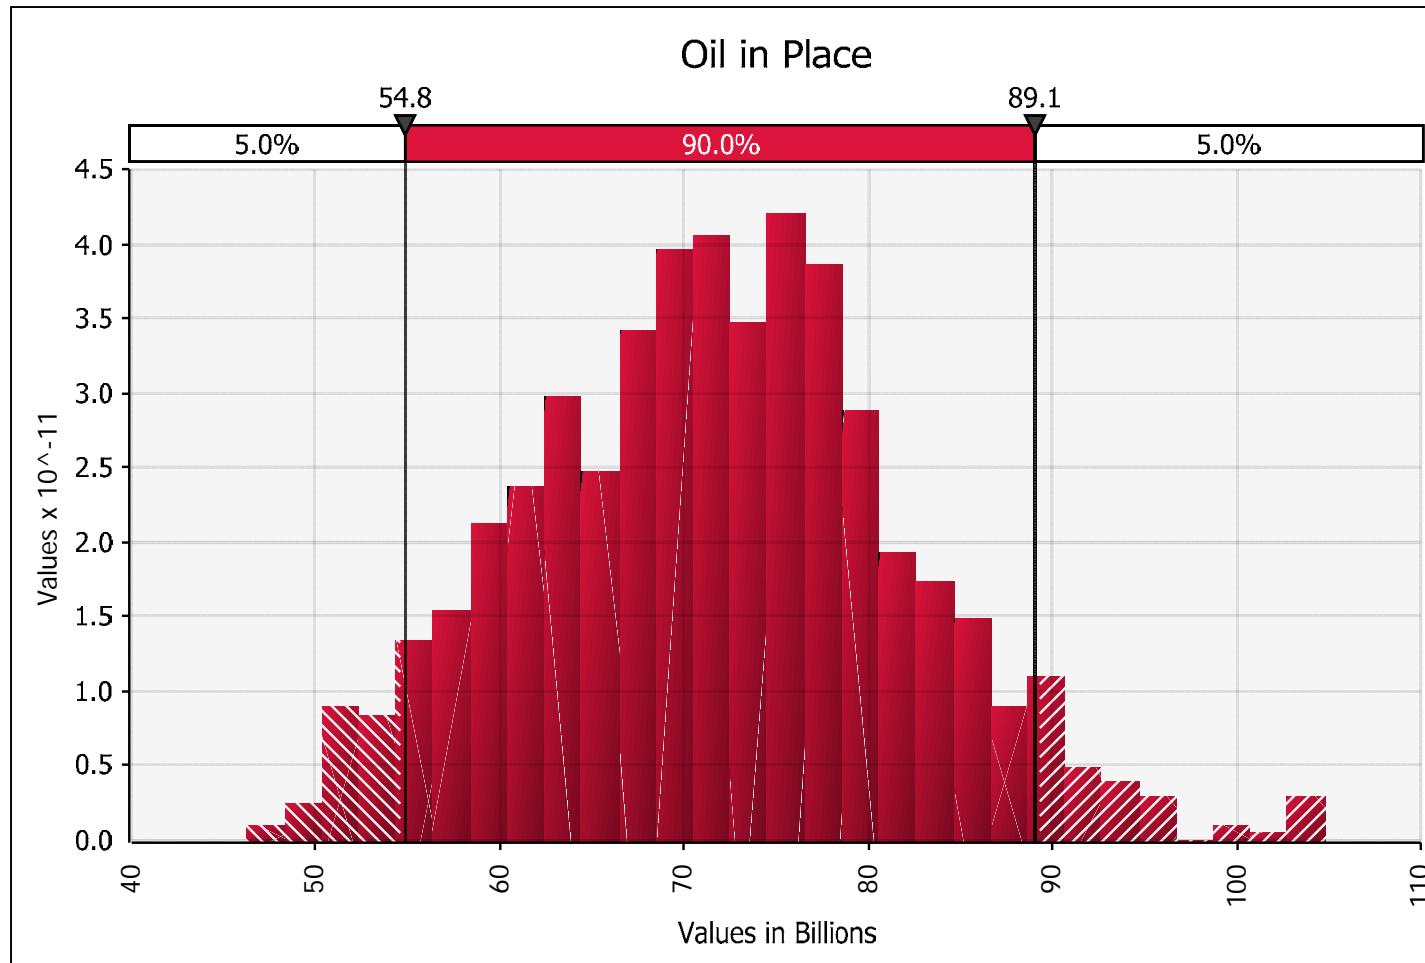

Results of the Assessment

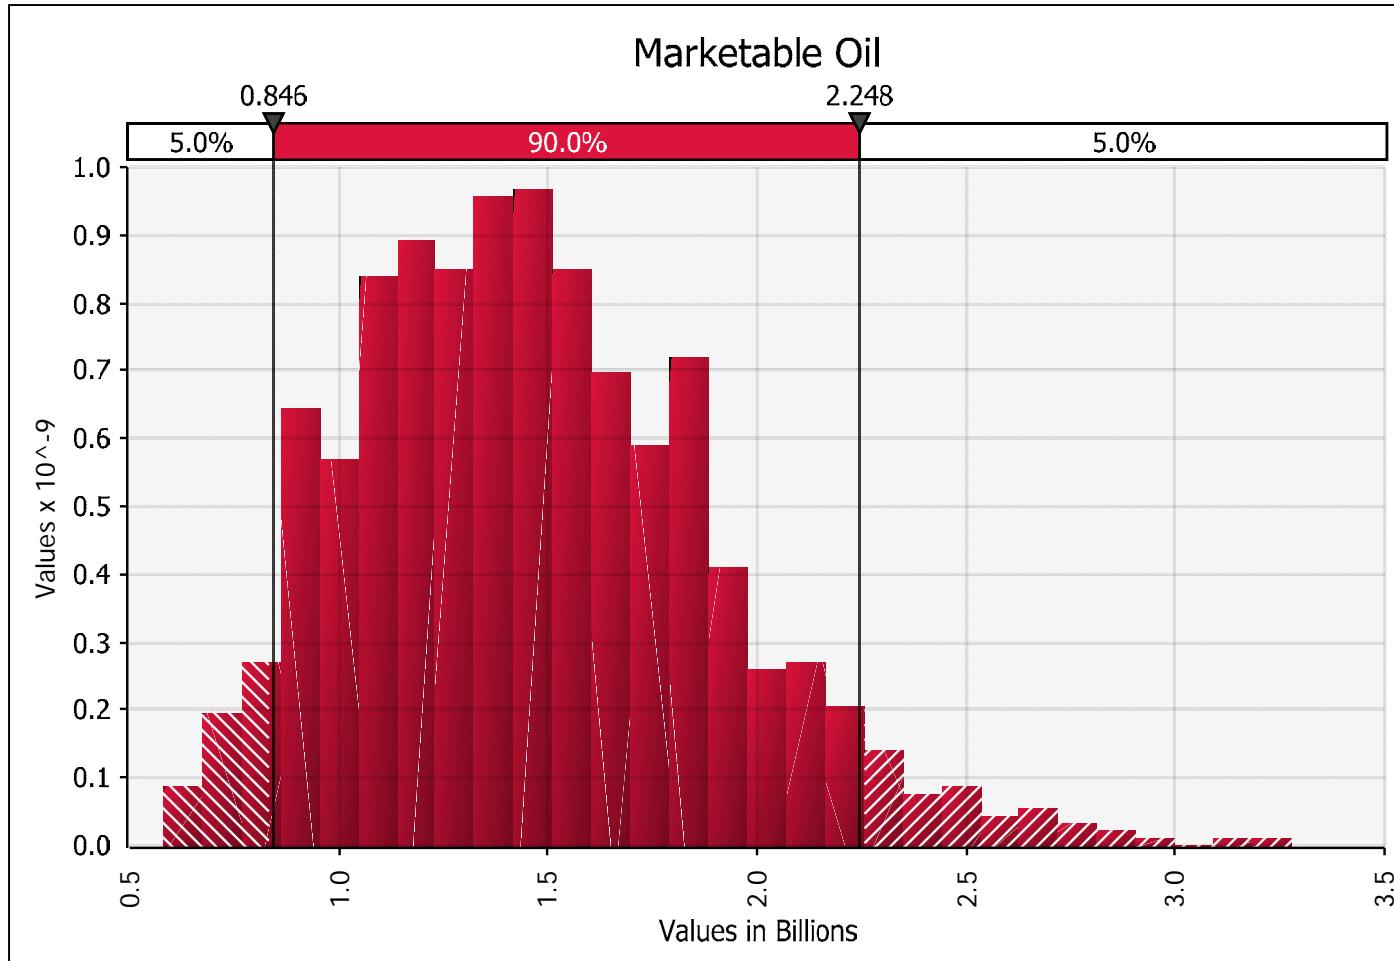

Oil – million m ³ (million barrels)	In-Place			Marketable		
	Low	Expected	High	Low	Expected	High
Viewfield	838 (5,429)	1,144 (7,200)	1,487 (9,359)	43 (273)	74 (464)	114 (717)
Border Continuous	414 (2,604)	573 (3,606)	750 (4,717)	22 (139)	38 (240)	61 (385)
Transition	7,144 44,951	9,562 60,164	12,390 (77,957)	67 (423)	111 (697)	170 (1,071)

Oil – million m ³ (million barrels)	In-Place			Marketable		
	Low	Expected	High	Low	Expected	High
	8,420 (52,984)	11,279 (70,970)	14,627 (92,033)	132 (835)	223 (1,401)	345 (2,173)

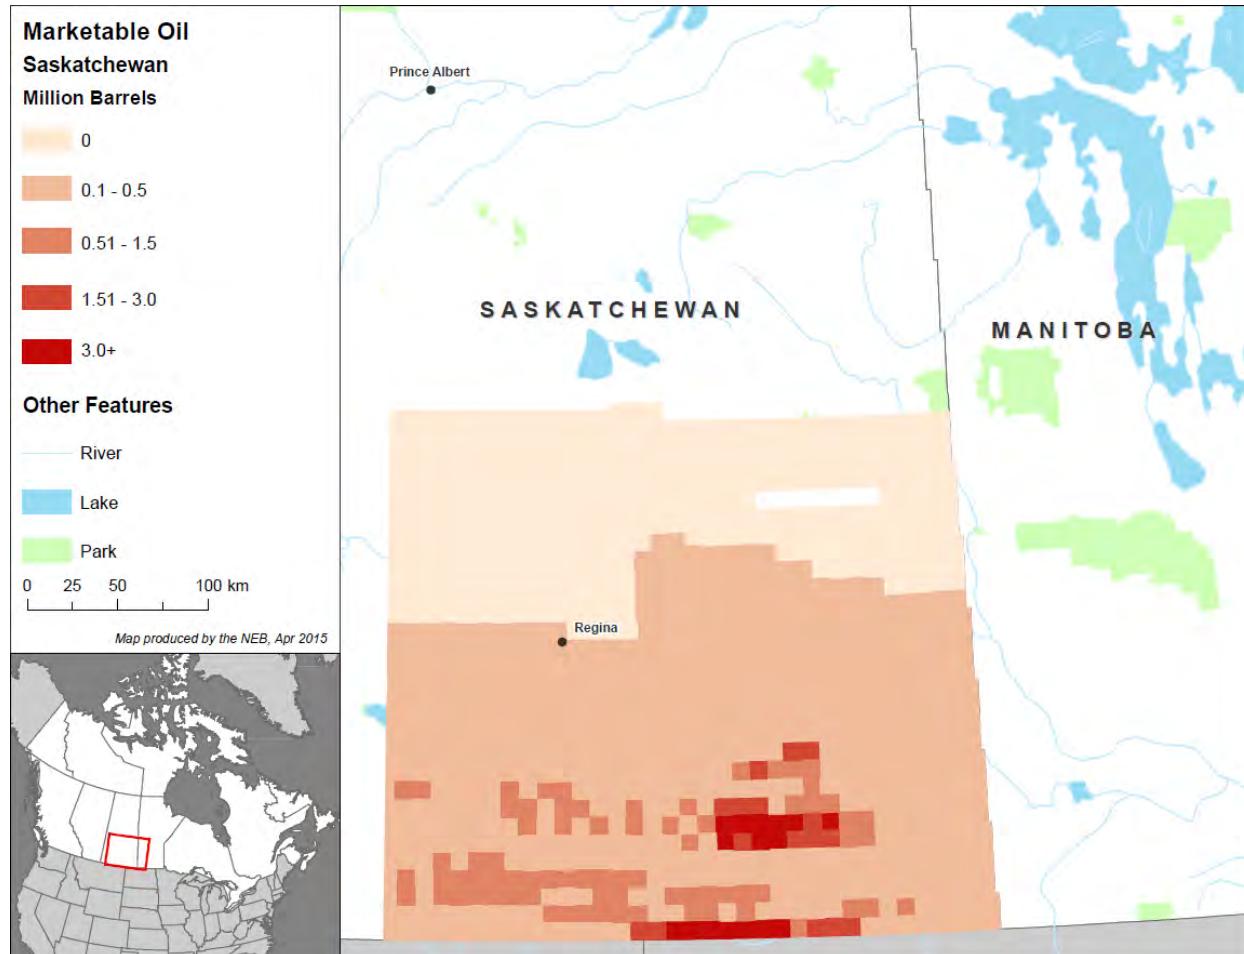

Oil in Place (bbls)

Marketable Oil (bbls)

Resource Map

Conclusions

- Cumulative production to year-end 2014 of 160 million barrels from unconventional Bakken leaves 1.2 billion barrels for future
- Associated Marketable Natural Gas is expected to be 2.89 Tcf
- The Bakken is likely one of the largest accumulations of tight oil in Canada.
